<u>For Immediate Release</u>

Oxford University Press adopts PaperStack for comprehensive editorial reporting

DataSalon's cloud-based PaperStack service provides Oxford University Press with a complete reporting suite across multiple peer review submission systems.

<u>Oxford, UK, September 2023:</u> DataSalon has today announced a new agreement with Oxford University Press (OUP) for the adoption of its PaperStack service. By adopting the service, OUP will be enabled to provide instant insights into its peer review process and enhance its source data with industry data from Ringgold, Funder Registry, ORCID, and Crossref.

PaperStack provides 'out-of-the-box' integration with ScholarOne and Editorial Manager, both of which are used by OUP to manage its journal submissions. Using tried-and-tested API integrations, DataSalon took care of harvesting, linking and enhancing the data to create a single unified view of all submissions across both systems, allowing detailed reporting across OUP's journals in one place.

Oxford University Press also uses PaperStack to provide reports directly to many of their partner societies – a huge benefit to publishing with OUP.

Michael Zeyfert, Head of Data Systems & Strategy at OUP, said: "We are pleased with how easy PaperStack makes it to provide detailed, user-friendly reports to our editorial staff, and to our society partners. The comprehensive insights are already making a real difference to our editorial program."

Nick Andrews, Managing Director of DataSalon, commented: "Oxford University Press are long-standing users of our flagship product, MasterVision, to support their sales and marketing teams – we're delighted that we can now provide similar levels of insight to their editorial staff through their adoption of PaperStack."
